Homework 2 approach

My approach for homework 2 was to follow the example validation as skeleton code and then add new function like checkname checkdropbox checkphone and checkaddress inplace of the previous checkemail. I then followed the similar approach of getting a boolean from the function and sending that to getNotify and getImage to have a check or a x and a message. I added a new function to validation1.js to check if all of the form booleans were true to then send it to the next page validation2.html.

Validation Form

File | C:/Users/cemor/OneDrive/Desktop/Comms%20319/Homework2/validation1.html

First name: ✖ Name should only contain alphabetic characters

Last name: ✖ Name should only contain alphabetic characters

Gender: ✖ Must select one of the dropdow options

State: ✖ Must select one of the dropdow options

Continue

Contact Information

File | C:/Users/cemor/OneDrive/Desktop/Comms%20319/Homework2/validation2.html

Email ✖ Email should be in form xxx@xxx.xxx, which x should be alphanumeric!

Phone ✖ Phone should be in form 123-456-7899 or 1234567899

Address ✖ Address should be in form City,State ex.(Ames,IA)
